

Corporate Presentation

April 2026

Cavvy Energy Ltd. – At a Glance

Corporate Overview

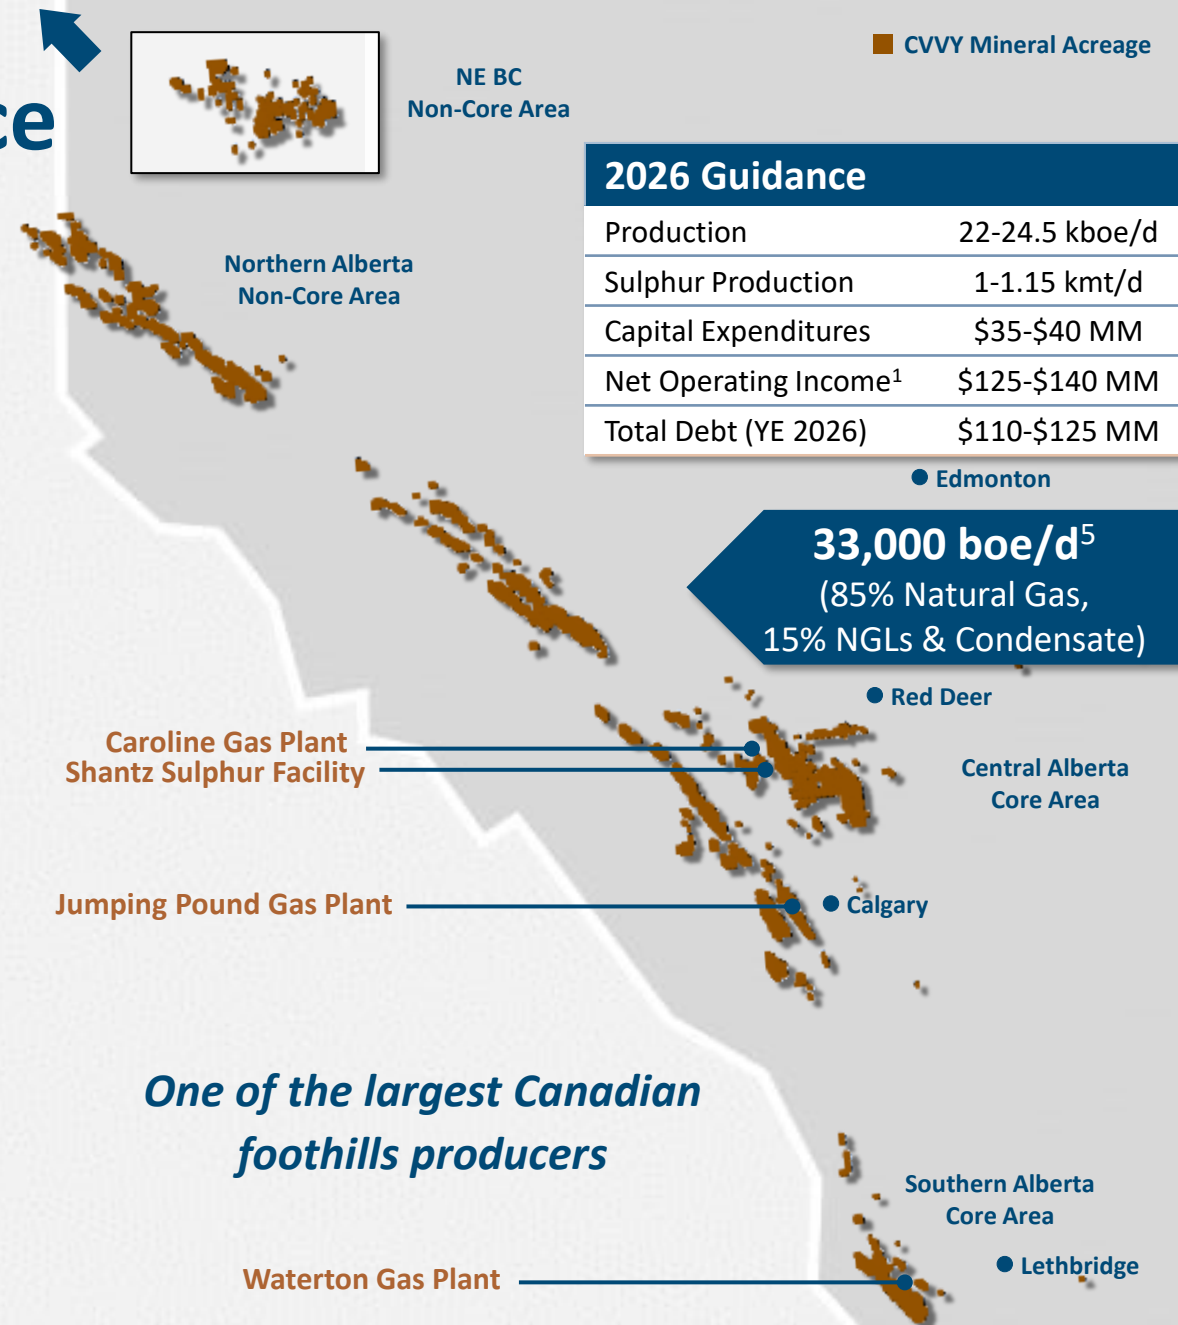

Cavvy is a TSX listed energy company with upstream and midstream assets concentrated in the Canadian foothills, home to some of the largest conventional natural gas reservoirs in North America.

Market Snapshot

Head office	Calgary, Alberta

Cavvy Energy Ltd. – Who We Are

New name, but a well-established history

The word “Cavvy” draws its inspiration from the western ranching tradition, referring to a carefully selected group of working horses chosen for their strength, reliability, and specific capabilities. The name evokes an identity synonymous with our corporate values and mission, and one that is proudly connected to our western Canadian corporate roots

Formerly Pieridae Energy Limited, Cavvy became a public company in 2017 through an RTO of Petrolia Inc. The Company accumulated natural gas focused production and processing infrastructure in western Canada, with aspirations of commissioning an LNG facility on Canada’s east coast

The Company changed its name to Cavvy Energy Ltd. on May 12, 2025 and is now trading on the TSX with ticker symbol CVVY

The name change and rebrand reflect the pivot from our LNG roots and the completion of our strategic shift towards our western Canadian upstream and midstream business

Executive Team

Over 130 years of energy industry experience

Darcy Reding, P. Eng | President & Chief Executive Officer | Joined Cavvy in 2021

Mr. Reding previously served as the Vice President of Operations & Geoscience at NAL Resources Management until the acquisition by Whitecap Resources in Q1 2021. Mr. Reding has 35 years of technical, business development and leadership experience that spans across the upstream and midstream segments at NAL, Enterra Energy, Samson Exploration, Northrock Resources, and Norcen Energy. Mr. Reding graduated from the University of Calgary with a Bachelor of Science in Chemical Engineering and is a Professional Member of the Association of Professional Engineers and Geoscientists of Alberta (APEGA).

John Emery | Chief Operating Officer | Joined Cavvy in 2021

Mr. Emery previously served Cavvy as Vice President, Operations and Interim COO. He boasts over 40 years of experience in the energy industry in Canada and internationally including work with Repsol, Talisman Energy and Kanati Energy. His unique background in petroleum engineering, entrepreneurship, project management and operations makes him a valuable member of the executive team. Mr. Emery hold a BSc (Petroleum Engineering) from Montana Technological University.

Adam Gray, CA CPA | Chief Financial Officer | Joined Cavvy in 2020

Mr. Gray previously served as Vice President and was subsequently promoted to CFO in Q1 2022. Mr. Gray has over 18 years of finance and accounting experience, including 8 years supporting the financing and construction of the CNRL joint venture Sturgeon Refinery. Mr. Gray earned his Chartered Professional Accountant designation at PwC.

Paul Kunkel, CFA | Chief Commercial Officer | Joined Cavvy in 2022

Mr. Kunkel joined the Company as CCO after serving as a consulting strategy and corporate development advisor since early 2022. Paul is a CFA charter holder and has over 30 years of finance, corporate development and management consulting experience at NAL Resources, Oliver Wyman, and Ontario Power.

Michael Bartley | Vice President, Human Resources & Corporate Services | Joined Cavvy in 2019

Mr. Bartley is a Human Resources Leader with over 20 years of progressive experience in both strategic and tactical roles. He has broad experience within oil & gas, wholesale food distribution and luxury hotel sectors. Prior to joining Cavvy, Mr. Bartley held positions with Canlin Energy Corporation, Centrica Energy Canada, and Direct Energy.

Board of Directors

Patricia McLeod, K.C. | Board Chair

Ms. McLeod is an experienced board chair, corporate board director, and a former senior legal executive, privacy, ethics and compliance officer. Ms. McLeod held Vice President and General Counsel roles in energy utilities and electricity retail, property development, insurance, and financial services companies. Ms. McLeod also serves as Board Chair of FutEra Power Corp. and as a director of Flair Airlines. She holds an MBA (Queens University) with Bachelor of Laws and BComm (U of A), as well as an ICD.D (U of C/Institute of Corporate Directors).

Darcy Reding, P. Eng | President & Chief Executive Officer

Mr. Reding previously served as the Vice President of Operations & Geoscience at NAL Resources Management until the acquisition by Whitecap Resources in Q1 2021. Mr. Reding has 35 years of energy technical and leadership experience at NAL and previously with Norcen Energy, Northrock Resources, Samson Exploration and Enterra Energy Trust. He holds a Bachelor of Science in Chemical Engineering (U of C) and is a Professional Member of the Association of Professional Engineers and Geoscientists of Alberta (APEGA).

Michael Backus, P. Eng. | Independent Director

Mr. Backus has over 25 years of experience in the energy industry and is currently the COO for the Upstream division of Kiwetinohk Energy Corp. Prior to joining Kiwetinohk in 2021, Mr. Backus previously held the roles of VP Canadian operations at CNOOC Petroleum North America ULC (formerly Nexen Inc.), and VP Operations and Development at Painted Pony Energy Ltd. He is a Professional Member of APEGA and holds the ICD.D designation.

Harvey Doerr, P. Eng. | Independent Director

Mr. Doerr has more than 29 years of experience in the energy industry, including broad exposure to domestic and international exploration and production, heavy oil and oilsands, offshore, refining, and retail marketing. Since his retirement as executive VP of Murphy Oil Corporation in 2009, Mr. Doerr has served as a director on several public, private and not-for-profit corporations. He earned a Bachelor of Science in Mechanical Engineering from the U of A, has completed the Advanced Management Program at Harvard Business School and holds the ICD.D designation.

Doug Dreisinger | Independent Director

Mr. Dreisinger is a veteran energy and chemical industry leader with over 40 years of experience spanning global markets. During his 20-year tenure at Nexen (now CNOOC), he rose to president of global energy marketing & trading. Mr. Dreisinger brings deep expertise in natural gas markets, power generation, and corporate restructuring. He is a chemical engineering graduate from Queens University.

Andrew Judson | Independent Director

Mr. Judson has more than 25 years of experience in Canadian energy capital markets and has advised some of the largest institutional investors in Canada, the U.S.A. and Europe on energy investments. Mr. Judson also serves a director on the boards of Condor Energies Inc., Drift Resource Technologies Inc., Field Safe Solutions. Previously, Mr. Judson was a managing director of Camcor Partners Inc. and FirstEnergy Capital.

Kiren Singh, CFA | Independent Director

Ms. Singh is founder and CEO of Haskalife, a privately held functional food and health ingredient company. Ms. Singh also serves on the board of directors of Computer Modelling Group (TMX: CMG) and the Alberta Cancer Foundation. She held senior executive roles including CFO during her 30-year international career in the energy sector including Gibson Energy Inc., OPTI Canada Inc., Value Creation Inc., Exxon Mobil Corporation and Mobil Corporation. She holds an MBA and BComm degree (U of C), as well as Chartered Financial Analyst (CFA Institute), CRM (Global Risk Management Institute) and holds the ICD.D designation.

Why Invest in Cavvy Energy?

A unique and diversified value proposition

Robust Upstream Assets

- 33,000 boe/d production capability¹
- Among the lowest annual base declines of WCSB producers at 5.9% - lower capital required to maintain/replace production
- Extensive, accretive high impact drilling inventory providing potential for organic growth to >50,000 boe/d
- Hydrocarbon sales generate ~65% of forecasted gross revenue in 2026

Gas Gathering & Processing

- Own & operate three deep-cut gas processing facilities in western Alberta with aggregate capacity exceeding 400 MMcf/d
- Reliable and growing cashflow generating midstream business
- Third-party volume handling generates ~10% of forecasted gross revenue in 2026

Important Sulphur Producer

- ~10% of Canada's sulphur production – a feedstock used globally in fertilizers and critical mineral mining
- Material incremental sulphur sales cash flow expected in 2026 after 2025 expiry of below-market sales contract
- Sulphur sales generate ~25% of forecasted gross revenue in 2026

Share Price Catalysts

Supportive shareholder base with several near-term catalysts

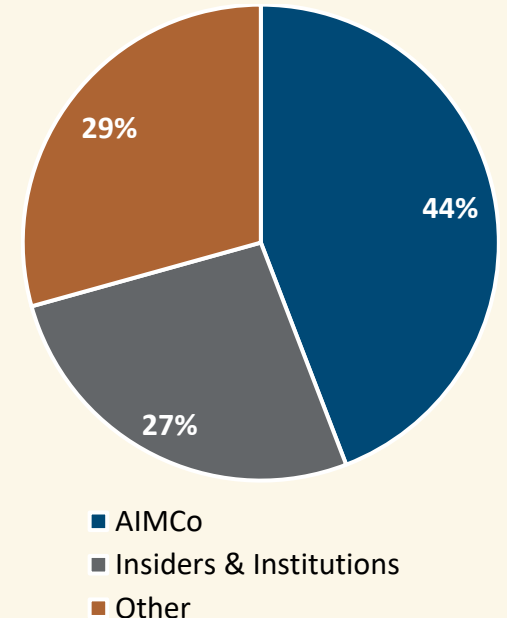

2026 Share Price Catalysts

- Substantial increase in revenue from strong sulphur pricing (currently > US\$500/mt)
- Growing fee-based revenue from midstream assets
- Target to repay up to \$50MM of long-term debt in 2026
- Cash-flow trading multiple expansion potential as midstream & sulphur revenue growth is captured
- Actively exploring accretive new business opportunities
 - Long-term power gen and data center partnerships
 - High impact drilling from existing inventory
 - Accretive NAV and cash flow M&A transactions

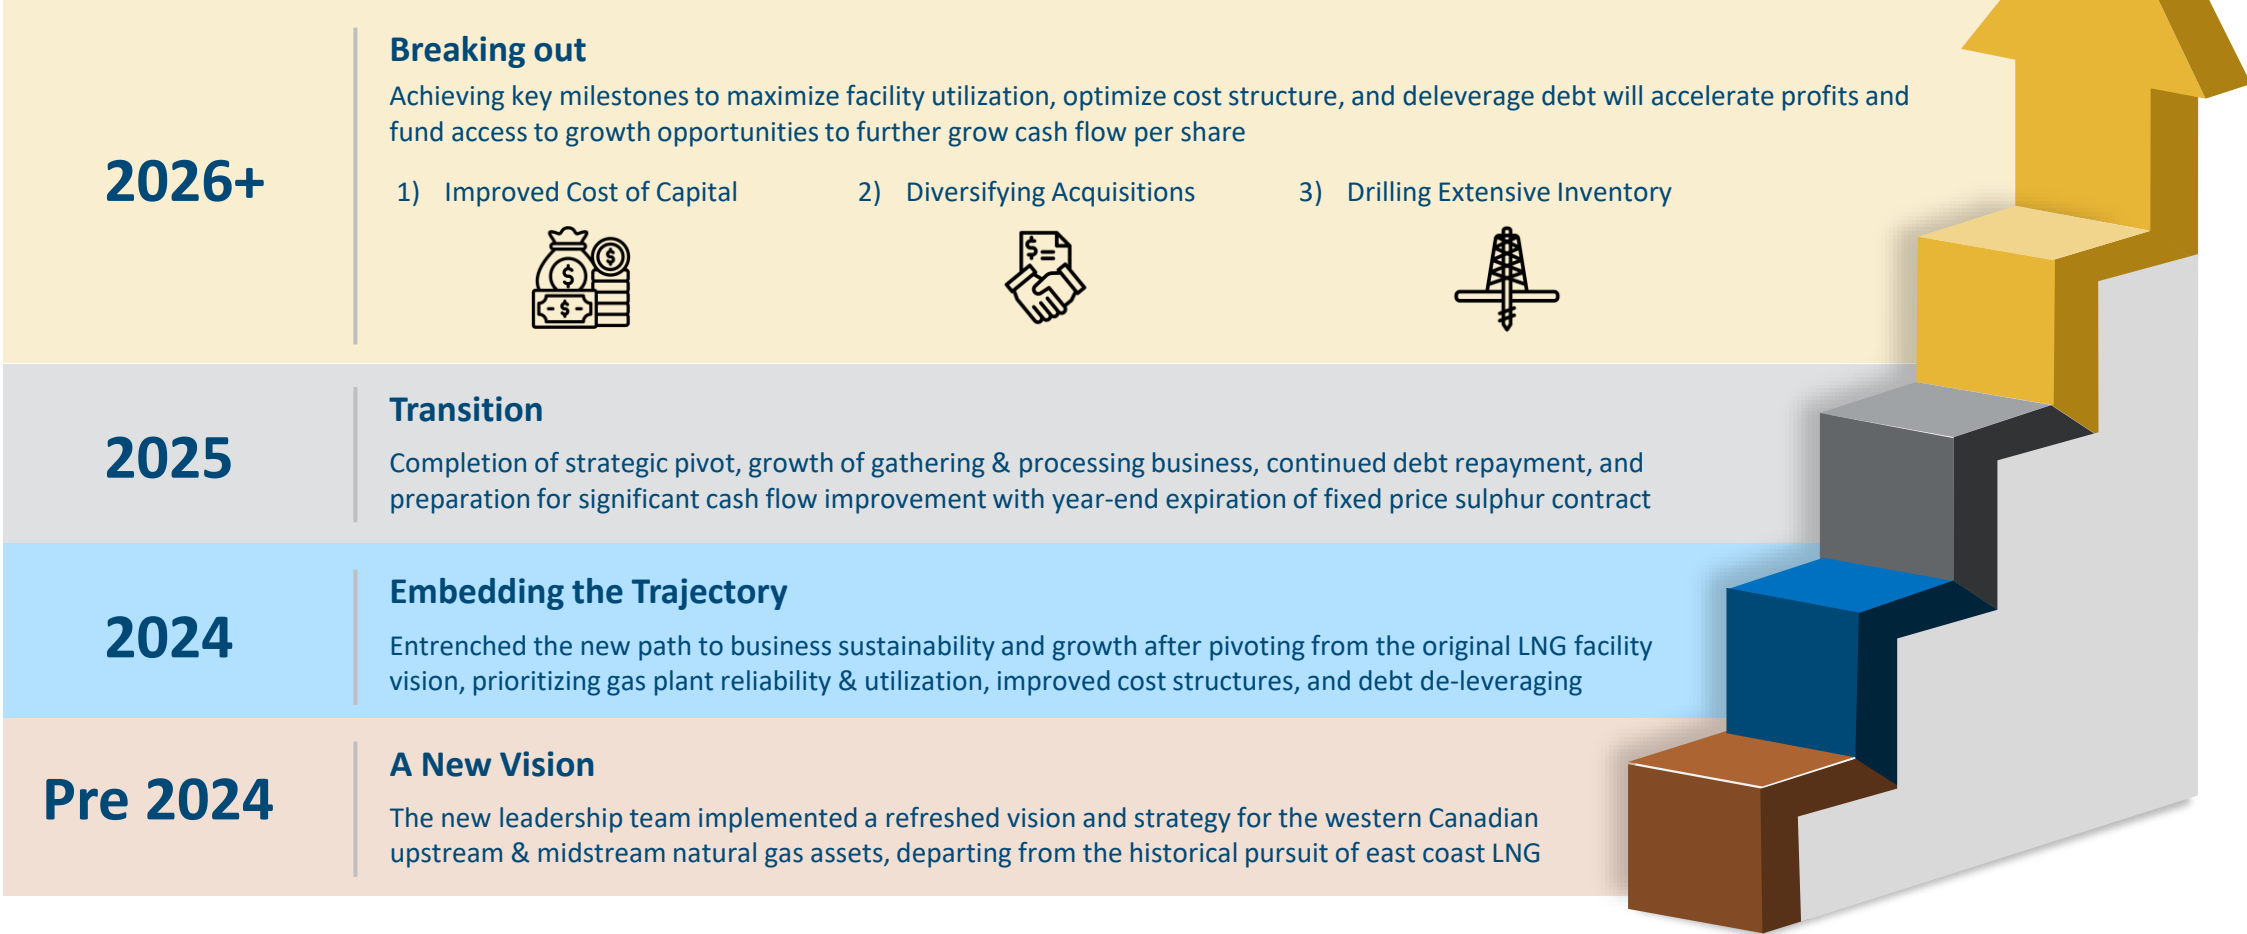

Supportive Ownership

- ~75% of common shares owned by institutions and insiders
- AIMCo, one of the largest institutional investors in Canada, owns 44%

Delivering on Strategic Initiatives

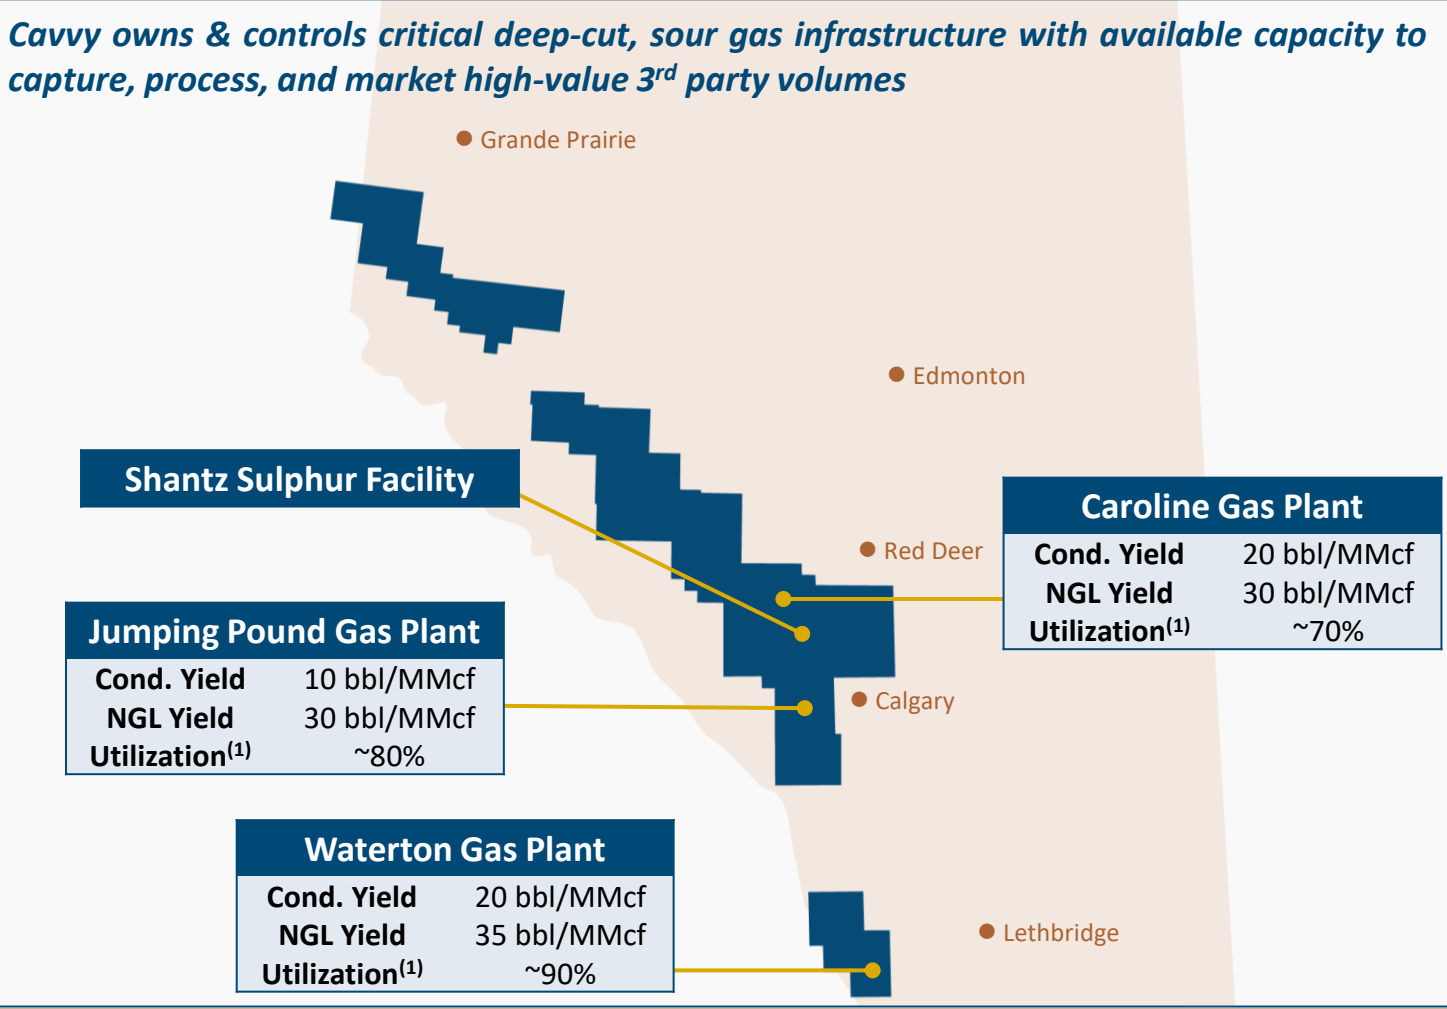

Cavvy is a premier energy company in western Canada

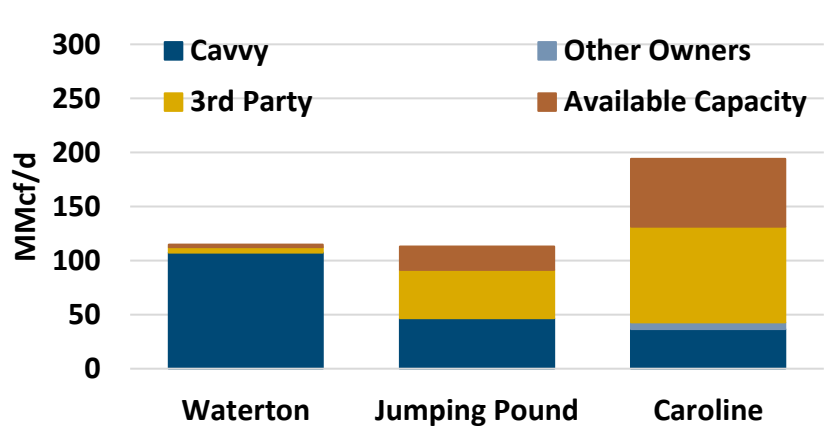

Strategically Located & Available Midstream Capacity

Over 110 MMcf/d of excess gas processing capacity in southern Alberta

Key Processing Facilities

Operated Gas Plant Utilization (Current) ⁽¹⁾

3rd Party Processing⁽²⁾ (MMcf/d)

Cavvy Energy (TSX:CVVY) ⁽¹⁾ Current plant throughput potential operating under normal steady-state conditions
⁽²⁾ Q4 2025 avg raw gas throughput

Important Contribution of Third-Party Processing

A growing value driver that de-risks the revenue stream

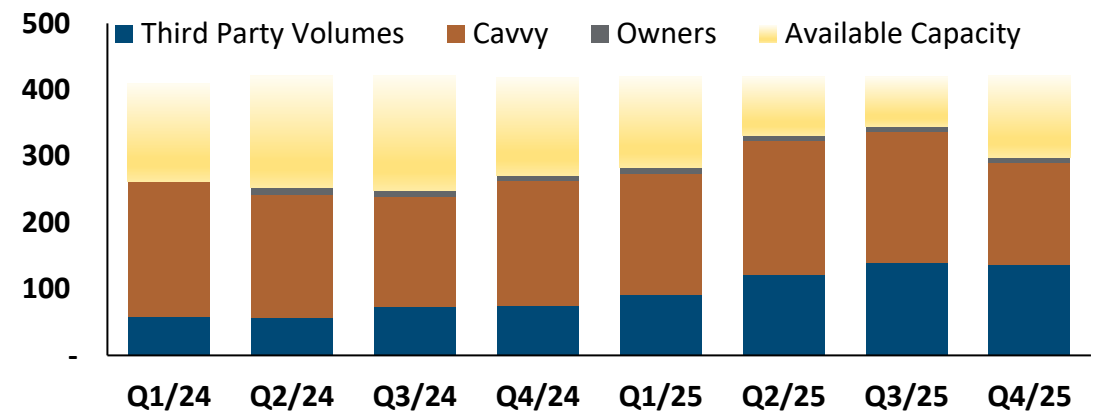

3rd Party Processing, Marketing, & Gathering Revenue⁽¹⁾ (\$MM)

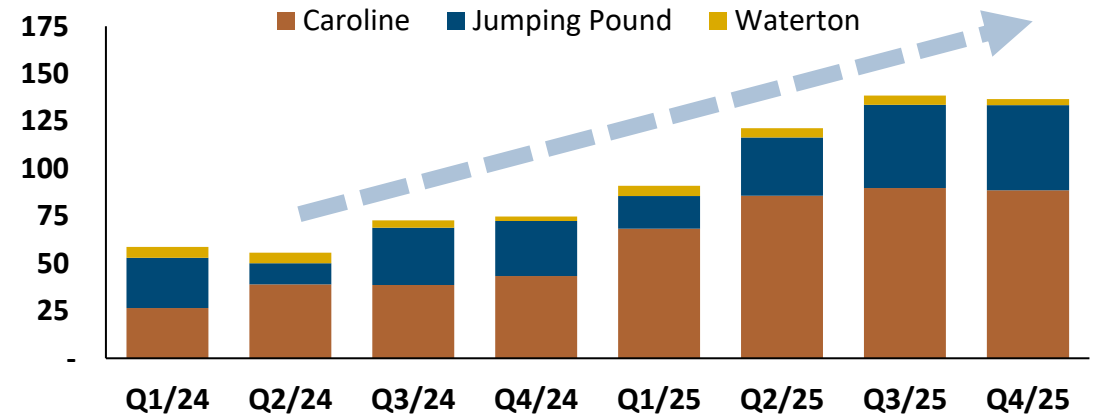

Five consecutive quarters of 3rd party processing volume and revenue growth:

1. Enhances gas plant operating efficiency while diversifying income stream from commodity pricing
2. Incurs negligible incremental cost to process while generating significant revenue
3. Reduces facility carbon emission intensity, lowering operating costs associated with carbon levy under the Alberta TIER program

Total Raw Gas Plant Throughput (MMcf/d)

Third-Party Processing Volumes by Plant (MMcf/d)

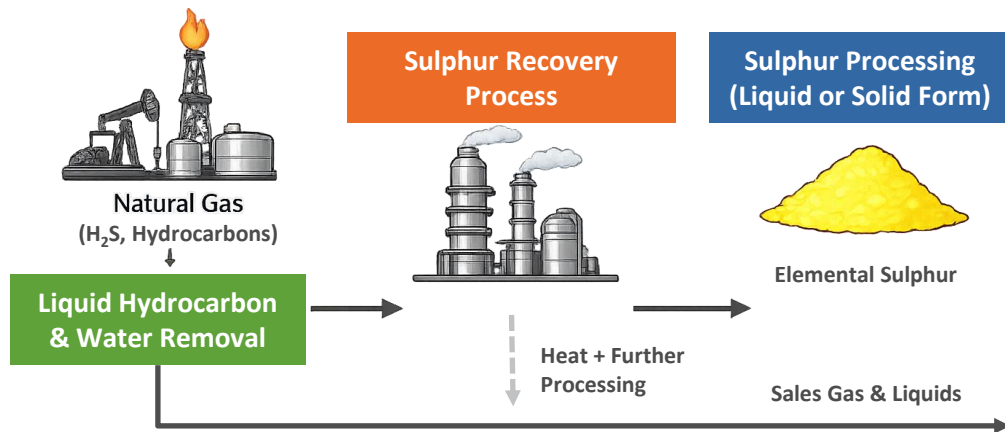

Understanding the Sulphur Market

Sulphur is a vital non-metallic element and plays an integral role in global industries

Sulphur 101

- Naturally occurring and 16th most abundant element on earth
- Largely produced as a byproduct of oil and natural gas refining and commonly referred to as elemental sulphur
- Sulphur exists as a solid at normal conditions, and melts into liquid form at ~120 °C
- Canada is the world's 6th largest producer (~6% of total output)¹

Sulphur Uses

- Agriculture: Sulphur is an essential plant nutrient and used extensively in fertilizer manufacturing
- Mining: Sulphuric acid (made from sulphur) is used in critical minerals mining and other chemical and industrial processes
- Rubber Vulcanization: automobile tires
- Pharmaceuticals: antibiotics, anti-inflammatory drugs and dermatological applications
- Battery Tech: key component in emerging lithium-sulphur (Li-S) batteries

Fertilizer in Agriculture

Emerging Li-S Battery Tech

Sulphuric acid in mining

Waterton Complex and Sulphur Storage

Shantz Sulphur Processing Facility

Sulphur Market Upside Exposure in 2026+

New structured 12-month forward pricing agreement de-risks 2026 cash flow

Significant upside with exposure to sulphur market started in January 1, 2026

- Sulphur production differentiates Cavvy from peers and is a significant catalyst to unlocking incremental shareholder value
- Cavvy was contractually obligated to sell 85% to 90% of sulphur to a 3rd party for CA\$6/mt net until Dec 31, 2025

Entered into a structured forward sulphur pricing agreement for 2026:

- 1/3 volume receives a fixed price of US\$225/mt⁵
- 1/3 volume priced with a collar floor of US\$205/mt and cap of US\$250/mt⁵
- 1/3 volume receives FOB Vancouver spot market price⁵
- No fixed volume commitment

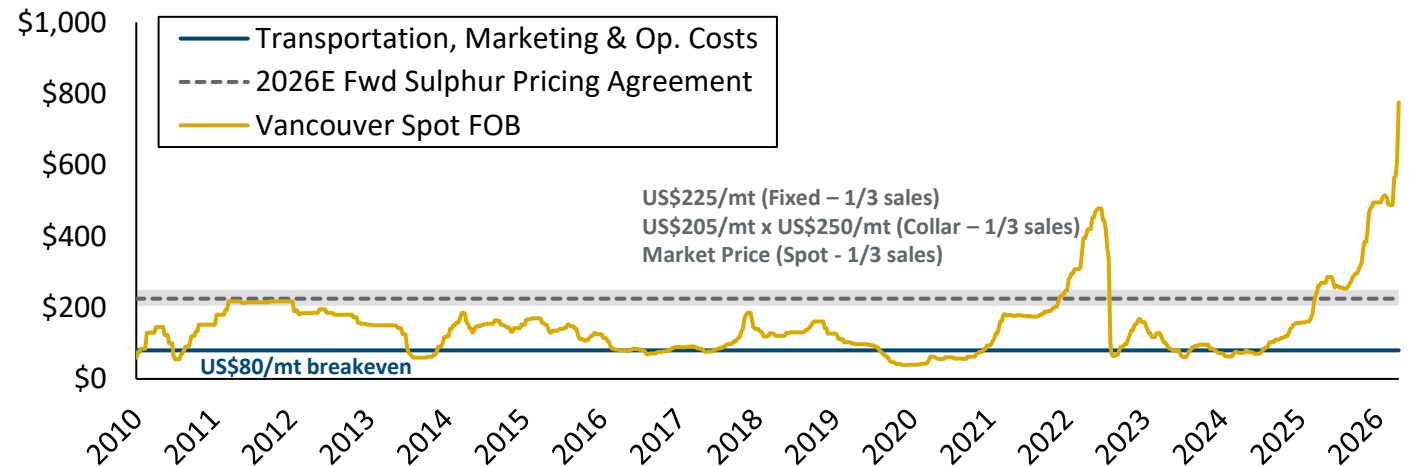

This one-year structured price agreement delivers downside protection and upside exposure on 2026 sulphur sales at higher price than the 15-year historical average of ~US\$148/mt

Illustrative 2026E Net Sulphur Revenue Sensitivity Under New Agreement (\$MM) ⁽¹⁾⁽²⁾⁽³⁾

- ① Leverage has weighed upon share price for several years, but focused debt repayment continues to reduce leverage to manageable levels; the gap to peers has narrowed with a diverging trend emerging
- ② Historically traded in-line with peers based on EBITDA; Trading at a ~1.x discount currently, leaving plenty of upside for multiple expansion despite a strong share price performance in 2025
- ③ Historically traded at a discount to peers on production due to a focus on infrastructure assets vs upstream; opportunity to narrow this discount with a renewed focus on growing the upstream business

ESG - Carbon Emissions Management

Cavvy continues to make progress reducing the carbon-intensity of our processing facilities

- Prudent carbon emissions management is a top priority, leading to lower carbon emissions costs at operated facilities
- Delivered significant reduction in carbon emissions intensity in recent years – met 2025 target of <54 mt CO₂^e/kboe
- Increased 3rd party volume throughput, reduced fuel gas consumption and improved facility reliability are contributing factors to emissions intensity reduction

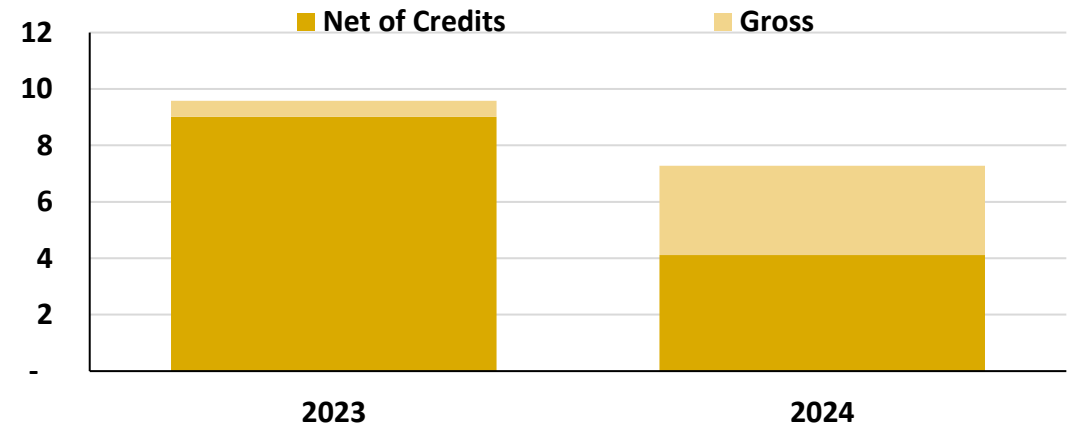

Gross Emissions True-Up Obligations by Plant¹ (000s tCO₂e)

Gross Corporate Emissions Intensity (000s tCO₂e/kBOE)

Corporate Compliance Costs (\$MM)

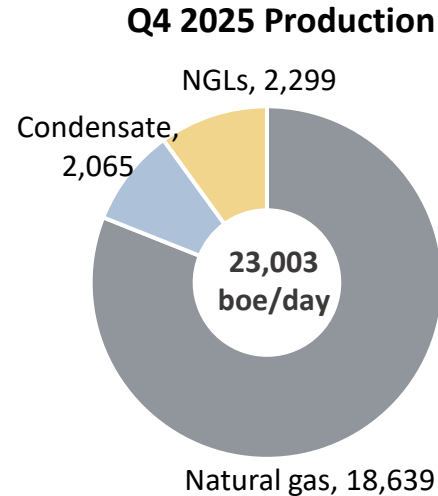

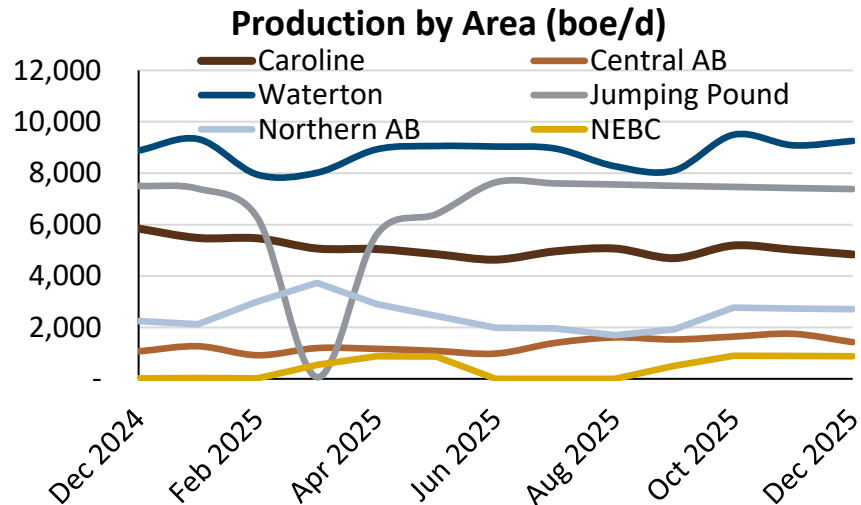

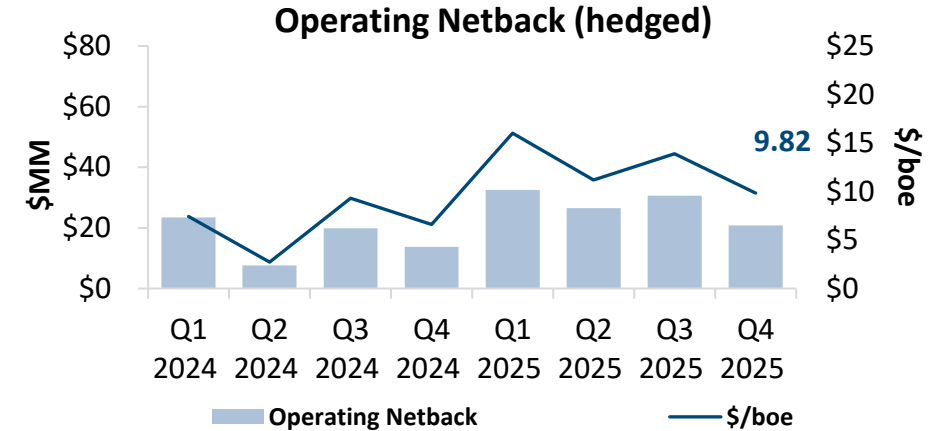

Operating & Financial Results, Outlook

Q4 2025 Operating Results

Continued growth in third-party business and production impacts from restarts and turnarounds

- **Production: 23,003 boe/d (81% gas) and 989 mt/d sulphur**
 - ~2,770 mcf/d of production in NEBC was restarted at the end of Q4 as AECO broke above breakeven thresholds
 - Production impact from scheduled maintenance turnaround at Waterton in October
- **Operating Costs: \$43.7 MM, \$20.64/boe**
 - Ongoing reduction of opex structure slightly offset by higher power costs during Q4
- **Grew third-party volumes by 83% and revenues by 135% compared to Q4/24**
 - 136.6 MMcf/d of raw gas processed in Q4, with Caroline contributing 88.6 MMcf/d
 - Processing revenues of \$12.6 MM, with Caroline contributing \$4.0 MM

Q4 2025 Financial Results

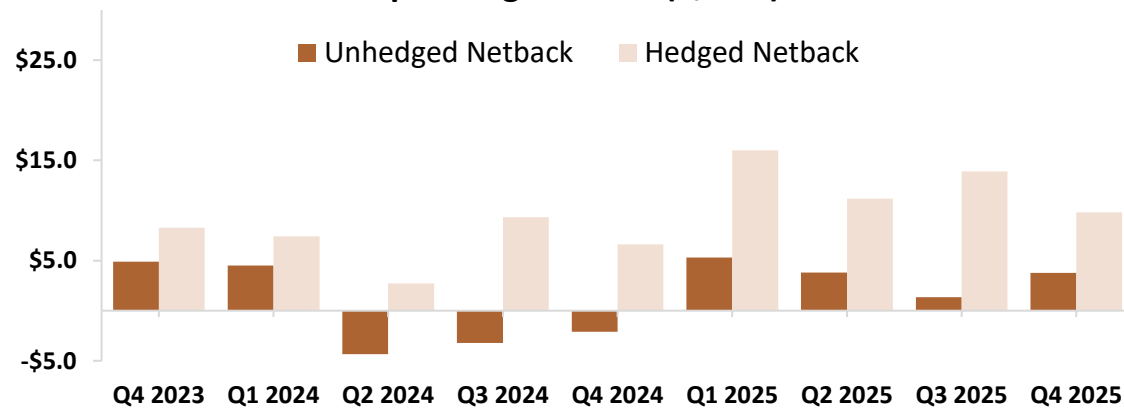

Higher capital quarter due to scheduled turnaround and abandonment spend but cashflow still robust

- **\$20.8 MM NOI** (\$9.82/boe, \$0.07 per basic share)
- **\$13.5 MM Funds Flow from Operations** (\$0.05 per basic share)
 - Realized hedge gain of \$12.8 MM
- **\$16.2 MM of Capital Expenditures**
 - Mainly related to scheduled maintenance at Waterton and \$5.8MM towards asset retirement obligations

FY 2025 Operating Results

Results reflect cost structure reduction and 3rd party processing business development initiatives

- **Production: 23,904 boe/d (80% gas) & 1,078 mt/d sulphur**
 - Voluntary shut-in of uneconomic dry natural gas production impacted ~8,700 boe/d
 - Production impact from scheduled maintenance turnaround at Waterton from Q3-Q4 and downtime at Jumping Pound in Q1
- **Operating Costs: \$164.8 MM, \$18.88/boe**
 - Ongoing reduction of opex structure resulting in ~\$21MM reduction compared to 2024
- **Grew 3rd party volumes by 86% and revenues by 92% compared to 2024**
 - 122.0 MMcf/d of raw gas processed in 2025
 - Processing revenues of \$38.8 MM

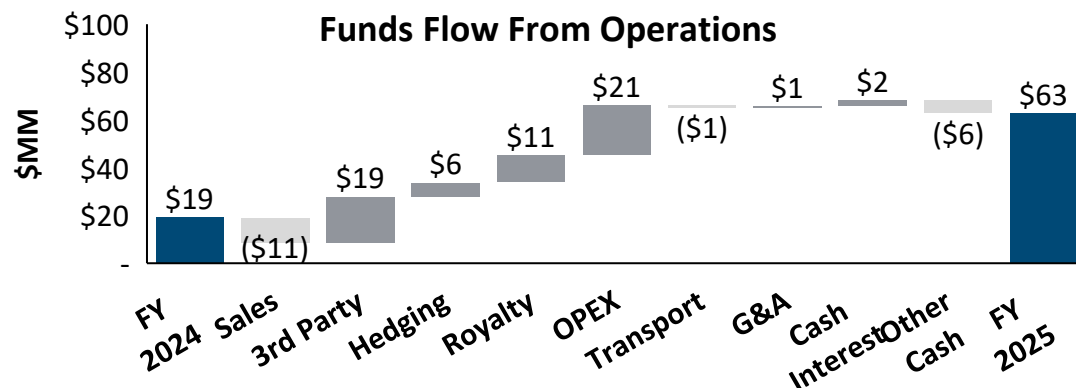

FY 2025 Financial Results

Strong year-over-year increase in funds flow and reduction in net debt

- **\$110.5 MM NOI (\$12.66/boe, \$0.38 per basic share)**
- **\$62.6 MM Funds Flow from Operations (\$0.22 per basic share)**
 - Realized hedge gain of ~\$79.7 MM, including ~\$10.2 MM of net proceeds related to a monetization of a portion of 2026/2027 hedges in Q1
- **\$30.8 MM of Capital Expenditures**
 - \$8.7 MM in high impact well and facility optimization projects with IRR>100%
 - Mainly related to scheduled maintenance at Waterton during Q3 – Q4 and routine maintenance work at Jumping Pound in Q1
- **Reduced Net Debt to \$170.6 MM**
 - \$26.9 MM reduction from 2024

Abandonment	(\$7.4)	(\$5.5)
Net Income/ (loss)	(\$5.0)	(\$38.9)
Net Debt	\$170.6	\$197.6

Focus on Debt Reduction

Improving financial leverage - reduced net debt by \$100MM since beginning of 2022

Significant Net Debt Reduction

Available Liquidity (\$MM)	YE 2024	YE 2025
Cash and equivalents	\$8.6	\$5.8
Undrawn Revolving Loan	\$10.1	\$5.3
Total Liquidity	\$18.6	\$11.1

Debt Capitalization (\$MM)	YE 2024	YE 2025
Senior Facility		
Revolving Loan	\$21.6	\$24.8
Term Loan	\$112.6	\$88.0
Subordinated Notes	\$46.8	\$46.1
Total Debt	\$181.0	\$158.9

- **Total debt of \$158.9 MM and net debt of \$170.6 MM in Q4/25**
 - Net debt down \$26.9 MM and total debt down \$22.1 MM year-over-year
- **Disciplined debt reduction strategy has resulted in a substantial reduction in debt service costs**
 - cash interest costs are down 12% from 2024 to 2025
- **US\$27MM (~\$37MM) of senior term loan repaid with senior revolving loan undrawn in Q1 2026 YTD**

Net Operating Income Sensitivity

Operating expense significantly impacts NOI, highlighting importance of cost structure reduction

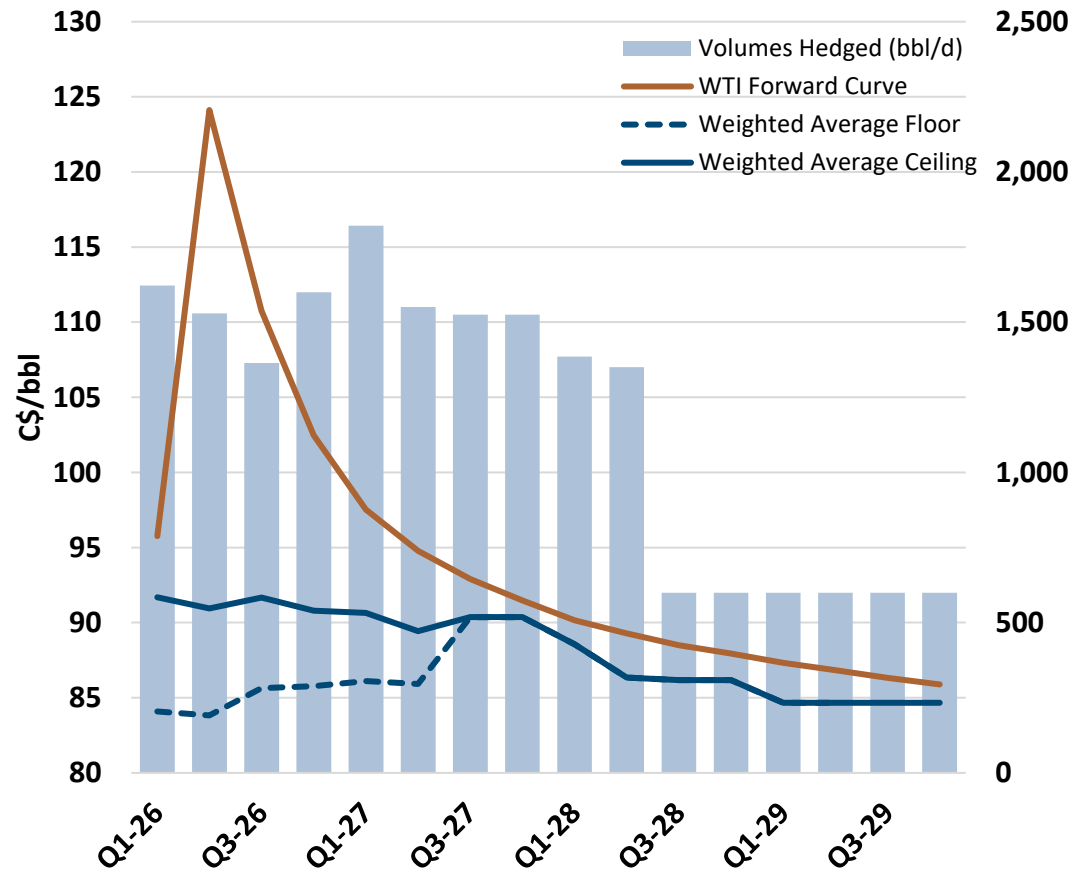

- The NOI Sensitivity chart shows the change in Q4 Net Operating Income from a 10% change in each variable on a hedged basis
- The Company's remains focused on maintaining production and controlling operating costs
- Current hedge positions largely insulate NOI from AECO price exposure

Hedge Position

Hedges underpin revenue stream

- Commodity hedges continue to reduce revenue volatility

Liquids Hedges

- Rolling hedges may be added as market opportunities arise

Natural Gas Hedges

2026 Guidance

Strong sulphur and 3rd party processing support robust cash flow and debt reduction targets for 2026

Guidance Measure	2026 Guidance (Dec-25)	
	Low	High
Production (boe/d)	22,000	24,500
Sulphur Production (mt/d)	1,000	1,150
Net Operating Income (\$MM) ⁽¹⁾⁽²⁾	125	140
Capital Expenditures (\$MM) ⁽³⁾	35	40
Total Debt (YE26) (\$MM) ⁽⁴⁾	110	125

(1) Refer to the “non-GAAP measures” section of the Company’s latest MD&A

(2) 2026 guidance assumes average unhedged 2026 AECO price of \$3.15/GJ, average unhedged 2026 WTI price of US\$60.90/bbl and average unhedged 2026 Vancouver FOB Sulphur price of US\$237.50/mt; Includes the impact of hedge contracts and the 2026 structured sulphur price agreement

(3) Excludes asset retirement and decommissioning expenditures

(4) Assumes USD/CAD exchange rate of 0.7210

- 2026 Guidance includes downtime at Caroline for Q3 maintenance turnaround (~6 weeks) and downtime at Waterton in Q2 (~2 weeks) for maintenance outage on the non-operated sales gas transportation system
- 2026 capital includes \$15-\$20 MM directed to the scheduled turnaround at Caroline, \$8 MM directed to asset retirement and reclamation obligations, and \$5 MM directed to IT and plant control system upgrades
- Majority of expected 2026 FCF will be directed to paying down long-term debt

Growth in processing revenue, operating cost reductions, and strong hedging gains provide support for NOI guidance through 2026; 2026E NOI represents a ~25% increase vs mid point of 2025 NOI guidance

Path to Shareholder Value

Establishing and growing a premier energy company focused in Western Canada

- **Simplify the business by focusing on western Canadian upstream and midstream assets**
 - Completed strategic pivot culminating in sale of legacy Goldboro LNG assets, new corporate brand
- **Lower leverage to reduce risk and improve financial flexibility**
- **Improve facility reliability to reduce production downtime and increase revenue**
- **Consolidate production into owned processing facilities to dilute fixed operating costs and improve operating efficiency**
- **Implement identified cost savings opportunities to improve netback**
 - Execute on high-impact well and facility optimization program
- **Grow midstream business to increase revenue certainty and further dilute fixed operating costs**
 - Attract 3rd party volumes, particularly in Central AB
- **Generate sufficient free funds flow to enable growth through drilling and acquisition**

Thank You

Appendix A – Asset Detail

Waterton Core Area Overview

Overview Map

Upside

- Low-risk sour drilling opportunities and sweet gas play delineation, complemented by near-term recompletion and reactivation potential
- Condensate-rich development drilling locations provide high netback opportunities over multiple thrust sheets
- Bypassed Cretaceous intervals provide opportunity to delineate new sweet gas/oil plays

Inventory Summary (Net Locations)

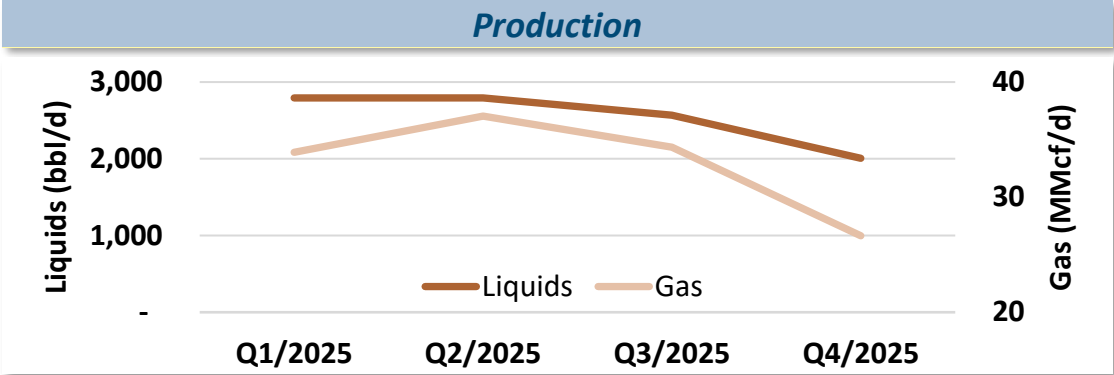

Note: 1a: booked undeveloped; 1b: high-conviction unbooked; 2: near-term potential locations; 3: longer term potential locations; 4: exploration prospects

Waterton Core Area – continued

Proved Developed
Producing NPV10
\$274MM¹
¹YE25 Evaluator Pricing

Waterton Deep Cut
Sour Gas Processing
Facility with
Fractionation
100% Working interest
(~90% utilization)

Central AB & Caroline Core Area Overview

Overview Map

Upside

- Development upside highlighted by:
 - Ostracod – low risk, highly productive
 - Mannville – well established, liquids-rich, highly productive
- Horizontal drilling has proven effective by others in all target zones elsewhere in the CAB Foothills and plains region

Inventory Summary (Net Locations)

Note: 1a: booked undeveloped; 1b: high-conviction unbooked; 2: near-term potential locations; 3: longer term potential locations; 4: exploration prospects

Caroline Core Area - continued

Proved Developed
Producing NPV10
\$125MM¹
¹YE25 Evaluator Pricing

Caroline Deep Cut
Sour Gas Processing
Facility
74% Working interest
(~70% utilization)

Production

Other Revenue (\$'000s)

Operating Netback (\$/boe)

Jumping Pound Core Area Overview

Overview Map

Upside

- Upside consists of a combination of development and exploration targets:
 - Infill Turner Valley opportunities offsetting existing fields
 - Sweet and sour exploration drilling opportunities in the Jumping Pound and Moose Mountain areas

Inventory Summary (Net Locations)

Note: 1a: booked undeveloped; 1b: high-conviction unbooked; 2: near-term potential locations; 3: longer term potential locations; 4: exploration prospects

Jumping Pound Overview - Continued

Proved Developed
Producing NPV10
C\$213MM¹

¹YE25 Evaluator Pricing

Jumping Pound Deep
Cut Sour Gas
Processing Facility
with Fractionation

100% Working interest

(~80% utilization)

Production

Other Revenue (\$000s)

Operating Netback (\$/boe)

Northern AB Area Overview

Overview Map

Upside

- Combination of traditional vertical multi-zone completions, and horizontal targets in the Dunvegan, Cadotte and Falher
- Ojay contains abundant Mannville and Nikanassin reservoirs with up to 100m of cumulative net sand that historically produce comingled in directional completions

Inventory Summary (Net Locations)

Note: 1a: booked undeveloped; 1b: high-conviction unbooked; 2: near-term potential locations; 3: longer term potential locations; 4: exploration prospects

Marketing & Logistics

Natural Gas:

- All three facilities are pipeline connected to **TC Energy's Nova System**.
- Historically, with all liquids stripped by the deep cut processing facilities, Cavvy receives ~98% of the AECO 5A benchmark.

NGLs:

- C3, C4, C5+ production is marketed through third parties.
- Cavvy has the ability to market C2 (ethane) in liquid or gas form depending on market conditions.

Sulphur:

- Sulphur is marketed by third parties under various contracts.
- Sulphur produced from wells that were acquired in the 2019 acquisition is sold at \$6/mt until Dec. 31, 2025.
- All other produced sulphur (including production from new wells) is sold at a net market price.

Cavvy's deep cut sour gas plants provide diversified revenue from multiple product streams.

Facility	Product	Transportation
Caroline Deep Cut, Sour Facility	Natural Gas	Pipeline
	C2-C4	Pipeline
	C5+	Pipeline
	Sulphur	Rail or Truck
Jumping Pound Deep Cut, Sour Facility with Fractionation	Natural Gas	Pipeline
	C2	Pipeline
	C3, C4	Rail or Truck
Waterton Deep Cut, Sour Facility with Fractionation	C5+	Rail or Truck
	Sulphur	Rail or Truck

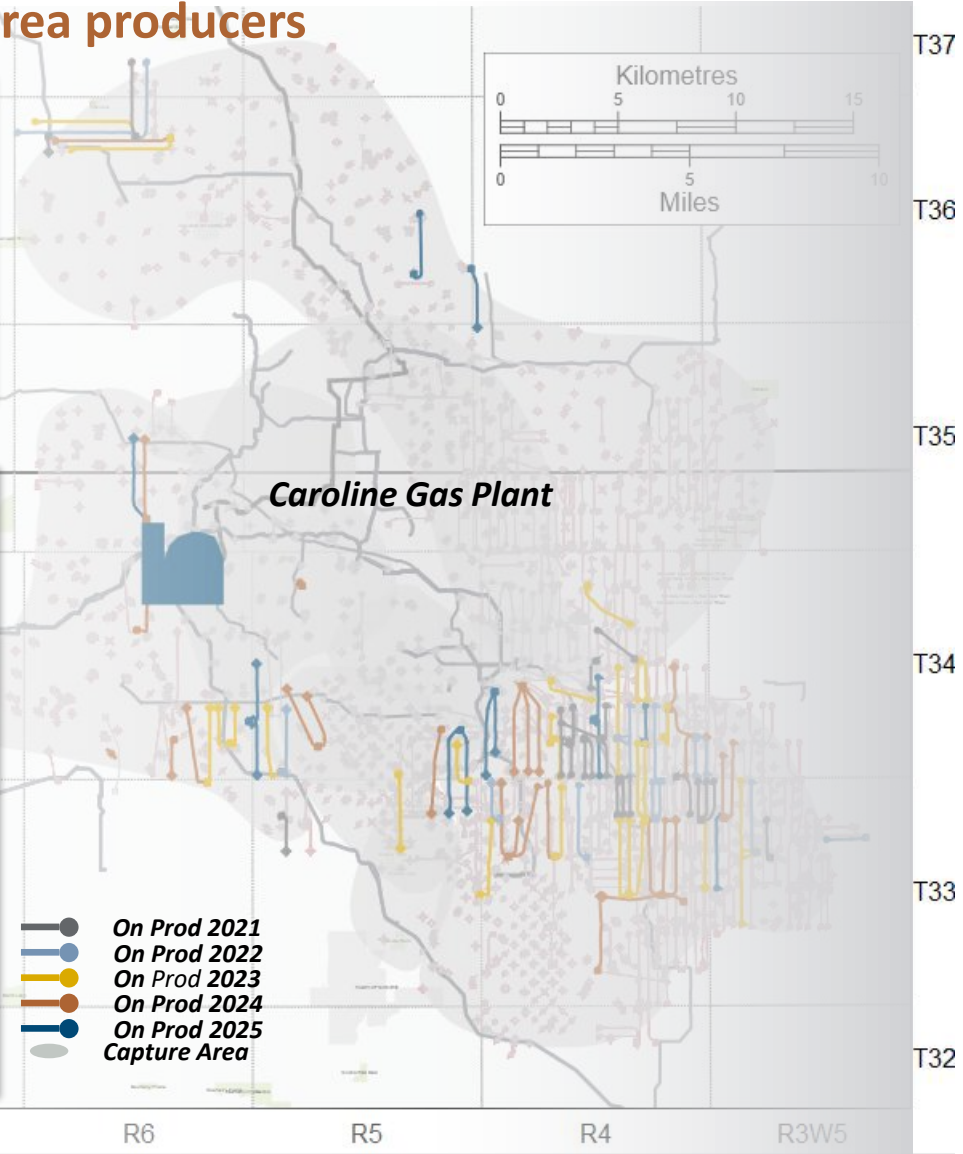

Cavvy Drilling Inventory Classification

Tier	Tier Subdivision Scheme	POP ⁽²⁾
1a	Booked undeveloped – wells are captured in reserves report	100%
1b	Bookable but not currently captured in the reserves report	90%
2	Short term: development wells that don't fit reserves criteria. May need technical work, minor surface/access/tie in location issues, etc.	50%
3	Long term: moderate confidence exploration wells or long step-out wells. Needs more work to progress to drillable status, major location issues	35%
4	High risk exploration wells or wells with challenges that may not be possible to overcome.	10%
5	Mineral rights are not presently owned. Crown purchase, farm-in or other rights acquisition is required.	0%

Caroline Gas Plant: A Beacon Gas Processing Hub

Renewed customer service focus creates 'facility of choice' for area producers

- Significant 3rd party liquids-rich natural gas drilling in surrounding area, primarily focused in the Mannville Glauconitic and Ellerslie formations
- The Caroline Gas Plant offers extensive infrastructure reach, excess capacity, deep cut NGL recovery, and a competitive (and improving) cost structure
- Ample raw gas processing capacity to capture area production growth
- Capture area served by existing gathering system spans >500km²

Appendix B – Foothills Geology

Introduction to the Canadian Foothills

Central Alberta Foothills Cross Section through Bighorn (left) and Cordell/Stolberg (right) gas fields

- Canadian Foothills oil and gas reservoirs produce from folded and faulted carbonate or clastic reservoirs
- Productivity is enhanced when extensive naturally fracture systems are intersected by wellbores. This eliminates the need for hydraulic stimulation of the reservoirs
- Paleozoic carbonates tend to form long-traveled thrust sheets, often stacked vertically in large duplexes. The upper sheets in the duplexes can be extensively fractured due to movement/folding from underlying sheets (e.g., Waterton)
- Cretaceous clastics are passively carried and deformed by the underlying carbonate sheets. This creates additional complexity and higher order folding which can enhance productivity. Additional folding and faulting is often present due to the interbedded nature of the reservoirs and numerous detachment surfaces in coals and ductile shales.

Generalized Lithological Controls on Fold Style and Fracture Development

Clastics

- Interbed slip (deck of cards)
- Can generate intermediate-scale complex folds
- Thin bedded units can be highly fractured depending on lithology
- Best to target areas of high strain (near faults or tight folds)

Dolomitized Carbonates

- Very brittle, can be highly fractured
- Can form large anticlinal closures
- Massive beds → large fracture apertures at outer arc
- Reservoir enhancement via dolomitization

Limestone

- Less brittle → targeting hinges key
- Can form both simple folds and highly complex folded and faulted structures
- Smaller fracture apertures
- Pressure solution in inner arc

Foothills Fracture Systems

Idealized fold-related fracture systems (Feltham, 2006 after Sterns, 1968). Type 1 fractures are oriented parallel to the maximum principal stress direction. Type 2 fractures develop perpendicular to the principal stress direction and form due to outer arc extension on mechanical units. There are Type 3 and shear orientations that are also observed. In general, Type 1 fracture systems provide connection to large reservoir areas (storage) and Type 2 systems provide high deliverability to the wellbore.

Conjugate fracture system in a Type 1 orientation in Paleozoic carbonates, Central Alberta foothills. This fracture set is known to have the widest aperture and storage capacity in the subsurface. Perpendicular intersection of these fractures along the structural crest make for prolific foothills wells.

Horizontal wells best exploit fractured reservoirs as shown in this outcrop example from Taylor, 2004. A vertical well (right) intersects and drains a very limited portion of the reservoir (pink) due to the low probability of a vertical well intersecting vertical fractures. This is in contrast to a horizontal well drilled into the same reservoir and accessing more of the reservoir (orange and purple) due to the well being oriented at a high angle to the fractures.

Cautionary Statements

This presentation is for informational purposes only and does not constitute an offer or recommendation to purchase, subscribe for, retain, or sell securities in Cavvy Energy Limited ("Cavvy" or the "Corporation").

Certain of the statements contained herein, including, without limitation, management plans and assessments of future plans and operations, Cavvy's 2026 capital budget, Cavvy's future business plan and strategy, Cavvy's criteria for evaluating acquisitions and other opportunities, Cavvy's intentions with respect to future acquisitions and other opportunities, plans and timing for development of undeveloped and probable resources, available drilling inventory, timing of when the Corporation may be taxable, estimated abandonment and reclamation costs, plans regarding hedging, wells to be drilled, the weighting of commodity expenses, expected production and performance of oil and natural gas properties, results and timing of projects, access to adequate pipeline capacity and third-party infrastructure, growth expectations, supply and demand for oil, natural gas liquids and natural gas, industry conditions, government regulations, and capital expenditures and the timing and method of financing thereof may constitute "forward-looking statements" or "forward-looking information" within the meaning of applicable securities laws (collectively "forward-looking statements"). Words such as "may", "will", "should", "could", "anticipate", "believe", "expect", "intend", "plan", "potential", "continue", "shall", "estimate", "expect", "propose", "might", "project", "predict", "forecast" and similar expressions may be used to identify these forward-looking statements. These statements reflect management's current beliefs and are based on information currently available to management as of the date of this presentation.

Forward-looking statements are based on a number of factors and assumptions which have been used to develop such forward-looking statements, but which may prove to be incorrect. Accordingly, readers should not place undue reliance on the forward-looking statements and information contained in this presentation. In making forward looking statements, Cavvy has made assumptions regarding the general stability

of the economic and political environment in which Cavvy operates; the ability of Cavvy to retain qualified staff, equipment and services in a timely and cost efficient manner; the ability of Cavvy to operate the assets in a safe, efficient and effective manner; ; future oil and natural gas prices; currency, exchange and interest rates; the regulatory framework regarding royalties, taxes and environmental matters in the jurisdictions in which Cavvy operates; timing and amount of capital projects and associated expenditures, future sources of funding, production levels, weather conditions, success of exploration and development activities, access to gathering, processing and pipeline systems, advancing technologies, and the ability of Cavvy to successfully market its oil and natural gas. Cavvy disclaims any obligation to update or revise any forward-looking statements, whether as a result of new information, future events or otherwise except as required by law.

Forward-looking statements involve significant risk and uncertainties. A number of factors could cause actual results to differ materially from the results discussed in the forward-looking statements including, but not limited to, risks associated with oil and gas exploration, development, exploitation, production, marketing and transportation, loss of markets, volatility of commodity prices, currency fluctuations, environmental risks, competition from other producers, incorrect assessment of the value of acquisitions, failure to realize the anticipated benefits of acquisitions, delays resulting from or inability to obtain required regulatory approvals and ability to access sufficient capital from internal and external sources and the risk factors outlined under "Risk Factors" in the Company's most recently published Annual Information Form.

Readers are cautioned that the foregoing list of factors is not exhaustive. Additional information on these and other factors that could affect Cavvy's operations and financial results are included in reports on file with Canadian securities regulatory authorities and may be accessed through the SEDAR+ website (www.sedarplus.ca), and at Cavvy's website (www.Cavvyenergy.com).

Statements relating to "reserves" are forward looking statements due to the fact that they involve the implied assessment, based on certain estimates and assumptions, that the reserves described exist in the quantities predicted or estimated and that the reserves can be profitably produced in the future. There are numerous uncertainties inherent in estimating quantities of reserves of natural gas, natural gas liquids and other commodities and the future cash flows attributed to such reserves. The reserve and associated cash flow information set forth above are estimates only. In general, estimates of economically recoverable reserves of natural gas, natural gas liquids and other commodities and the future net cash flows therefrom are based upon a number of variable factors and assumptions, such as historical production from the properties, production rates, ultimate reserve recovery, timing and amount of capital expenditures, marketability of oil and natural gas, royalty rates, the assumed effects of regulation by governmental agencies and future operating costs, all of which may vary materially. For these reasons, estimates of the economically recoverable reserves of natural gas, natural gas liquids and other commodities attributable to any particular group of properties, classification of such reserves based on risk of recovery and estimates of future net revenues associated with reserves prepared by different engineers, or by the same engineers at different times, may vary. Cavvy's actual production from its reserves and the revenues, taxes and development and operating expenditures generated or incurred with respect to its reserves will vary from estimates thereof and such variations could be material.

Barrels of oil equivalent ("boes") may be misleading, particularly if used in isolation. A boe conversion ratio of 6 Mcf: 1 Bbl is based on an energy equivalency conversion method primarily applicable at the burner tip and does not represent a value equivalency at the wellhead.
